AMMEX

Breakthrough in water quality control

AMMEX is a unique, dry powder, water conditioner that has been scientifically formulated to remove, and thereby detoxify, ammonia, chlorine and chloramines from water for use in all types of fish and aquatic invertebrate culture.

Biotechnology Benefiting Aquaculture

Great for:

- PL transport and daily addition to PL tanks to moderate ammonia levels.
- Fish transport
- Ammonia control in emergency situations
- when conditioning new water for aquariums, tanks, ponds and live-haul containers
- after or during water additions
- before adding new plants, invertebrates fishes or amphibians to an existing aquarium, tank, or pond,
- Addition to live-haul containers, during transportation of live fishes, amphibians, or aquatic invertebrates, to control and eliminate ammonia in the shipping water.

FOOD FISH USE

AMMEX may be used on aquatic animals intended for human consumption. The United States Food & Drug Administration (FDA) has determined that the use of AMMEX in water with fishes and aquatic invertebrates (e.g. lobsters, shrimp, crabs, clams, oysters) intended for human consumption does not come under FDA jurisdiction. For a copy of the FDA's "letter of determination" please write or fax us.
